/day/Cow**

User Instructions: Take 8/10 Litres totally well dried Bucket. Take 5 Litres water in it. Just add 5ml DFA CMB (1 Cap of 60ml Bottle= 5ml) {White Cap is 6ml} to 5 litres water, and mix by hand 2 times only. Now DFA +Water mix is ready. Take 700ml from this, mix with Cow Dry Feed (Rice / Wheat Bran + Dhals dust/shells) 250 to 300 grams, and give to each Cow. For Small Cows give only 600ml and for Big Cows give 800ml. Dosage is generally 2ml/kg of weight of Cows. Give this continuously for first 15 days. Then give a gap of one day after every 3 days. i.e. give 3 days out of every 4 days. **Note:** Also read detailed instructions given with the product, and see Videos.

User Instructions for Cattle Dry Feed Additive (DFA)

Preparing: Ready DFA + Water mix: In a 8 / 10 litres dry plastic bucket, take 5 litres of well or tap water. Shake 60 ml DFA bottle once, take 5ml Ready DFA with help of the Cap of this 60ml Bottle. This Bottle Cap measures approx 5ml only. (White Cap is 6ml. The 5ml level is marked on the side of the bottle) and add with 5 litres water in the bucket. Stir or mix by hand 2 times only. Now 5 litres of Dry Feed Additive (DFA) Water mix is ready. See Video at: <https://youtu.be/Plf-yYHOsCs>

How much to give as Dosage for One Cow?: From this 5 litres DFA Water mix, give to each Cow at about 2ml per Kg of Cows body weight. Small Cows weight is 250-300 kgs. Medium Cows weight is 300-400 kgs. Big Cows weight is 400-450 kgs. So Dosages for 1. Small Cows is 600ml. 2. Medium sized Cows is 700ml and 3. Big Cows is 800ml Per day (approximately)

How to Feed the Cows these Dosages 600ml /700ml / 800ml? Mark 700ml on a Plastic Mug with marker Pen. Keep this always inside DFT + Water mix bucket. Take Dry natural or Dry Organic mixed Feed about 250 to 300 grams in a bowl or bucket and simply add 700ml DFA Water mix with dry feed, and mix by hand 8 or 10 times, and give to each Cow separately. Cow will eat this DFA Water mix added dry feed happily. See Video at: <https://youtu.be/uIspIgkgVKA>

For 7 Cows take 1.75kg to 2 kg dry mixed Cow feed in a 25 or 30 litres Plastic tub, just add the prepared 5 litres of DFA Water mix, mix well and give to 7 Cows of equal quantity of DFA water mix added feed. This can be given once a day to Cows. Give first 15 days continuously, after that give a gap of one day after every 3 days. (Give only 3 out of 4 days) (Mixed Cow feed is Rice Bran /Wheat Bran + Dust /shell of dhals)

Feeding Time for Cows: Give this Cow Milk Booster 3 hours after or 3 hours before main feeding time. i.e between 12 noon and 3 pm.

Sprinkling DFA Water Mix for many Cows in rows: By using an ordinary garden water Sprinkler, this DFA Water mix can be simply sprinkled onto Dry Cow feeds (eg. Dry Straw) with approximate quantity of 600-700ml per Cow, where giving to each Cow is difficult. Make sure the DFA water mix is eaten by the Cows along with dry feed.

Mixing DFA Water mix of 10 Ltrs or 20 Ltrs:

For 10 Litres: Take 10 litres water in a dry 12/15 litre bucket, add 10ml DFA and mix by hand 3 times only. This can be given to 14 Cows.

For 20 Litres: Take 20 litres water in a dry 25 litres bucket, add 20ml DFA and mix by hand 4 times only. This can be given to 28 Cows.

Storing of 5 / 10 / 20 Litres DFA Water Mix:

This can be stored for a week or maximum 10 days by fully covering the Bucket with a lid, and taken out daily for use. Make sure, that ordinary water do not get mixed with this. Keep the measuring mug inside this bucket itself.

Note: Do not add this DFA Water mix with wet feed or semi wet feed; only add with totally Dry feed only.
